PROFILE

Results-driven Data Scientist and AI Automation Enthusiast with a proven track record of leveraging machine learning, deep learning, and workflows to drive strategic decision-making and operational efficiency. Adept at building and deploying end-to-end predictive models, developing low-code automation prototypes, and crafting prompt libraries to optimize business processes. Combines technical expertise in Python, SQL, and NLP with strong communication skills to translate complex AI concepts into actionable business solutions and structured SOPs.

EXPERIENCE

Data Analyst and Project Management Intern

OCT 2023 –
FEB 2024

MERISKILL

Engineered scalable analytics solutions and Power BI dashboards using T-SQL and Python, driving data-led decision-making that optimized project delivery efficiency by 15%. Coordinated cross-functional project workflows using Agile methodologies, managing task allocation and reducing project delivery bottlenecks by 20%. Designed and deployed interactive executive dashboards in Power BI, streamlining weekly reporting processes and saving team members 5+ hours of manual data extraction weekly.

EDUCATION

Google Data Analytics Professional Certificate

COURSERA

– 2024

Completed a rigorous, multi-course academic curriculum focused on the foundations of data science, statistical analysis, and quantitative decision-making methodologies. Acquired advanced theoretical and practical training in the standard data analysis lifecycle: Ask, Prepare, Process, Analyze, Share, and Act.

IBM Machine Learning Professional Certificate

IBM COURSERA

– 2025

Completed a rigorous, multi-course curriculum covering advanced mathematical and statistical foundations of machine learning, including supervised learning, unsupervised learning, deep learning, and reinforcement learning.

Conducted deep-dive market research and sector mapping across energy transition verticals, delivering actionable insights that informed 3 active investment theses for the investment committee.\nSupported due diligence processes for pipeline companies by performing financial analysis, conducting expert calls, and synthesizing findings into comprehensive investment memos.

Data Science Projects Intern

MAY 2024 – AUG
2024

COXOD

Developed and optimized predictive machine learning models using Python and Scikit-Learn, improving classification accuracy by 18% for core project deliverables.\nAutomated data workflows and processing pipelines using Python, improving data quality frameworks and reducing manual data processing time by 30%.\nConducted deep-dive exploratory data analysis (EDA) on multi-gigabyte datasets, uncovering key trends and translating them into interactive Tableau dashboards for stakeholder decision-making.

PROJECTS

Stock Market Prediction (LSTM Model)

Developed a high-performance time-series forecasting system utilizing Long Short-Term Memory (LSTM) networks to predict stock market price fluctuations. Engineered a robust data pipeline to ingest and preprocess historical financial data, integrating key technical indicators and market features.

Fraud Detection

Engineered an advanced machine learning pipeline designed to detect and flag fraudulent financial transactions in real-time, significantly mitigating operational risk. Implemented robust classification algorithms optimized to handle highly imbalanced datasets through strategic feature engineering and SMOTE techniques.

Insect Detection with transfer learning Model

Engineered a high-accuracy deep learning pipeline utilizing Convolutional Neural Networks (CNNs) to automate multi-class image classification. Implemented robust image preprocessing and data augmentation techniques to optimize model generalization and mitigate overfitting. Demonstrated end-to-end computer vision proficiency, successfully translating raw visual data into structured, actionable insights.
