PORTFOLIO

EXECUTIVE SUMMARY

Innovative and analytical Machine Learning Engineer with hands-on experience building predictive models, deep learning architectures, and scalable ETL pipelines using Python, TensorFlow, and SQL. Proven track record translating complex datasets into actionable insights across data analytics and venture research roles to drive cutting-edge tech solutions.

PROFESSIONAL EXPERIENCE

MERISKILL

OCT 2023 – FEB 2024

Data Analyst and Project Management Intern

- Engineered scalable analytics solutions and Power BI dashboards using T-SQL and Python, enabling data-driven strategic decisions and boosting project delivery efficiency by 15%.
- Coordinated cross-functional project workflows using Agile methodologies, optimizing task allocation and mitigating operational bottlenecks by 20%.
- Designed and deployed interactive executive dashboards in Power BI, automating weekly reporting workflows and saving team members 5+ hours of manual data extraction weekly.

ENERGY INNOVATION CAPITAL

SEP 2024 – OCT 2024

VC Industry Research & Pitch Deck Analysis

- Spearheaded comprehensive market research and sector mapping across high-growth energy transition verticals, formulating actionable insights that directly informed 3 active investment theses for the Investment Committee.
- Executed end-to-end due diligence for pipeline opportunities by performing complex financial modeling, conducting expert industry calls, and synthesizing key findings into high-impact investment memos to accelerate deal evaluation.

COXOD

MAY 2024 – AUG 2024

Data Science Projects Intern

- Architected and fine-tuned predictive machine learning models utilizing Python and Scikit-Learn, elevating classification accuracy by 18% across core project deliverables.
- Streamlined data operations by constructing automated end-to-end Python pipelines, reinforcing data quality frameworks and cutting manual processing time by 30%.
- Conducted rigorous exploratory data analysis (EDA) on multi-gigabyte datasets, translating complex trends into interactive Tableau dashboards to accelerate executive decision-making.

KEY PROJECTS

Stock Market Prediction (LSTM Model)

[LINK](#)

Developed an advanced time-series forecasting system leveraging Long Short-Term Memory (LSTM) deep learning networks to predict stock price movements with high accuracy.

Bank Fraud Detection

[LINK](#)

Engineered an end-to-end machine learning pipeline to identify and mitigate fraudulent financial transactions in real time, drastically reducing operational risk for banking systems. Implemented high-precision classification models optimized for severely imbalanced datasets using strategic feature engineering and SMOTE techniques. Built scalable data preprocessing workflows that deliver low-latency risk scoring and automated alerts for suspicious activity.

Insect Detection with transfer learning Model

[LINK](#)

Developed an automated insect detection system leveraging fine-tuned transfer learning architectures for high-precision multi-class image classification. Implemented comprehensive data augmentation and preprocessing pipelines to enhance model generalization across varied environmental conditions. Optimized pre-trained Convolutional Neural Networks to achieve superior feature extraction while successfully mitigating overfitting.

EDUCATION

Google Coursera

Google Data Analytics Professional Certificate
– 2024

Completed a rigorous, multi-course academic curriculum focused on the foundations of data science, statistical analysis, and quantitative decision-making methodologies.

CORE COMPETENCIES

Attention to Detail • Python Programming • SQL & Data Querying • Scikit-Learn • Model Evaluation & Tuning • Linear Algebra & Probability • Critical Thinking • MLOps & Model Deployment • Feature Engineering • Natural Language

IBM Coursera

IBM Machine Learning Professional Certificate
– 2025

Completed a rigorous, multi-course curriculum covering advanced mathematical and statistical foundations of machine learning, including supervised learning, unsupervised learning, deep learning, and reinforcement learning.

Processing (NLP) • Deep Learning

Architectures • Docker & Containerization

• Cloud Platforms (AWS/GCP) • Data

Preprocessing & Cleaning • Adaptability &

Continuous Learning
